

HTML Advanced - Quiz

Below is a scored review of your assessment. All questions are shown.

Correct Answer

Partially Correct

Incorrect Answer

1 Which attribute is used to specify the default value of an input field?

Your Answer value

Correct Answer value

Justification

You are correct!! The value attribute is used to specify the default value of an input field. It can be pre-filled with a value that the user can modify or submit as is.

2 What is the purpose of the <caption> element in HTML tables?

Your Answer To provide a title or description for the table

Correct Answer To provide a title or description for the table

Justification

You are correct!! The <caption> element is used to provide a title or description for the table. It is typically placed as the first child element within the <table> element and helps to give context or summarize the content of the table.

3 Which HTML attribute is used to define a header cell in HTML tables?

Your Answer scope

Correct Answer scope

Justification

You are correct!! The scope attribute is used to define a header cell in HTML tables. It is used within the <th> element and specifies the relationship between the header cell and its associated data cells. The scope attribute can have values such as "col", "row", "colgroup", or "rowgroup" to indicate the scope of the header cell.

4 Which HTML element is used to create an ordered list?

Your Answer ``

Correct Answer ``

Justification

You are correct!! The `` element is used to create an ordered list, where items are displayed in a specific order or sequence.

5 Which input type is used to capture a range of numeric values from the user?

Your Answer range

Correct Answer range

Justification

You are correct!! The range input type is used to capture a range of numeric values from the user. It typically displays a slider or a similar control that allows the user to select a value within a specified range.

6 What does the sandbox attribute in an iframe do?

Your Answer It restricts the iframe content from accessing the parent page.

Correct Answer It restricts the iframe content from accessing the parent page.

Justification

You are correct!! The sandbox attribute is used to create a restricted environment for the iframe content. It restricts the iframe from performing actions that could potentially harm the parent page, such as accessing the parent's cookies, modifying the parent's DOM, or opening new windows.

7

Which HTML element is used to define a table in HTML?

Your Answer

<table>

Correct Answer

<table>

Justification

You are correct!! The <table> element is specifically used to define a table in HTML. It serves as the container for all the table-related elements such as <caption>, <thead>, <tbody>, and <tfoot>, as well as the table rows and cells.

8 Which input type is used to capture a date input from the user?

Your Answer date

Correct Answer date

Justification

You are correct!! The date input type is used to capture a date input from the user. It typically displays a date picker or calendar widget to assist the user in selecting a date.

9 Which attribute is used to specify the starting value of an ordered list?

Your Answer start

Correct Answer start

Justification

You are correct!! The start attribute is used to specify the starting value of an ordered list. By default, the value is 1, but it can be customized using this attribute.

10 Which attribute allows the iframe to be loaded lazily, improving page load performance?

Your Answer lazy

Correct Answer lazy

Justification

You are correct!! The lazy attribute, when used with the src attribute in an iframe, enables lazy loading. Lazy loading delays the loading of the iframe until it is visible on the user's screen, improving page load performance by reducing unnecessary resource requests.
